“Six weeks ago I had high blood pressure. A revolutionary new device helped me lower it from 150/95 to 120/75.”

High blood pressure is often treated with drugs, exercise and dietary changes, but a revolutionary new machine lowers your blood pressure simply by using special breathing exercises.

Julie Austin, 38, was horrified when a check-up showed she had high blood pressure. She says, “I only went for a check-up because my father died of heart disease the previous fall. I am active and careful with my food but my blood pressure was 150/95, it should have been around 125/70.”

“Worrying about these results then shot my blood pressure up to 165/100. Even with medication my blood pressure was too high. Then I discovered RESPeRATE on the Internet and I bought one for \$299. It comes with a money-back guarantee if your blood pressure does not drop within eight weeks.”

“I used it for 15 minutes a day for six weeks and my blood pressure further dropped to 120/75. Working with my doctor, now I use RESPeRATE three times a week and no longer worry about heart attacks.”

Julie is not alone. RESPeRATE is clinically proven to lower blood pressure in seven clinical trials.

When you use RESPeRATE, you put on headphones and attach a sensor around your chest. RESPeRATE then measures your breathing rate. Next, using a series of audio-visual guides, RESPeRATE helps slow your breathing down to below ten breaths a minute. The exercise lasts for 15 minutes and needs to be performed 3 or 4 times a week.

High blood pressure is generally caused by your blood vessels tightening up and narrowing; this then causes your heart to pump harder. RESPeRATE's unique breathing exercise relaxes constricted blood vessels to reduce high blood pressure.

RESPeRATE has no medical side effects and is based on scientific research which shows how breathing exercises lower blood pressure. RESPeRATE can be used with your existing medication.

RESPeRATE will not lower your blood pressure too much; it has a normalizing effect.

Provided you use RESPeRATE 3 or 4 times a week, your blood pressure remains lowered between sessions. If you stop using RESPeRATE your blood pressure will eventually increase again.

RESPeRATE comes with an 8 week no-hassle money-back guarantee. We will refund the cost of your device in full, although we do not reimburse the cost of shipping and handling.

RESPeRATE costs \$299 + \$14.99 shipping and handling. However, shipping and handling is free if you respond to this advertisement within 14 days.

Order your RESPeRATE by calling 1-800-177-7778 or visit <http://www.resperate.com/>

RESPeRATE is proven to lower blood pressure in seven clinical trials. It is the first and only non-drug OTC device explicitly indicated for the lowering high blood pressure.

One out of four Americans has high blood pressure but only one-third of them are able to reach their lower blood pressure goals. Julie Austin was diagnosed with high blood pressure. With medication her blood pressure dropped slightly. After six weeks with RESPeRATE her blood pressure was normal.

Doctors on RESPeRATE

"I have seen first-hand that, as long as patients use the device regularly, blood pressure is reduced with none of the traditional side effects of drug therapy"

- **Dr William J. Elliott**, Rush Medical Center

"My patients thank me for recommending RESPeRATE and see real results"

- **Dr. Rowena Sobczyk, Family Physician Author of the book "My Body, My Health"** Atlanta, Georgia

Success stories

"I have been using Intercure's RESPeRATE Device regularly for almost three years.

It not only helps keep my blood pressure normal without medication, but it also brings a sense of calmness as if I had just meditated."

- **Constance, MI**

"Many thanks to my daughter for buying me RESPeRATE for Mothers' Day. Before using the device and while on meds, my BP was 150/90. Just two weeks after I first started using RESPeRATE, it just so happens that I got my blood pressure checked in a mall and my BP was 120/70."

"Using the device over the last year, I found it to be very effective in lowering my blood pressure. My systolic number now fluctuates now from 120 to 130. I am still on my meds but the RESPeRATE device helps a lot."

- **Doris, NY**

Please note: RESPeRATE should be used as part of your overall health program for achieving goal blood pressure, as recommended by your doctor. RESPeRATE is a device for high blood pressure treatment, which can be safely used in conjunction with medication and lifestyle modifications such as diet and exercise
